

Easier Stone Cleaning from a Compact Laser Package

The high energy ultra compact Nano TRL from Litron Lasers. Ultra Compact, very robust, extremely easy to operate and totally portable.

The all new Nano TRL compact high energy pulsed Nd:YAG laser from Litron has made stone cleaning applications a lot easier thanks to its compact size, portability and ease of use.

Requiring only AC power and with a completely self contained cooling supply, this system is ideal for field use in areas such as ancient monuments, cathedrals and museum artifacts.

The Nano TRL offers energies up to 850mj or repetition rates up to 200Hz. The unit is totally sealed against ingress and, thanks to the latest advances by Litron in mechanical design, is also extremely field rugged.

(See the Litron video @ http://www.litronlasers.com/pages/helpful_hints.html/).
